EXECUTIVE SUMMARY

Data Analyst and Microsoft Power BI–certified professional with experience delivering analytics solutions, building automated data pipelines, and training aspiring data professionals. Skilled in **Power BI, SQL, Python, Microsoft Fabric, and Snowflake**, with achievements including automating a Shopify ELT pipeline that eliminated **2+ hours of daily reporting** while tracking **\$6K+ in revenue**, and improving credit risk evaluation by **40%** across **5,000+ customers**. Specializes in end-to-end analytics, business intelligence, and predictive modeling that transform complex data into actionable business insights. Ready to help organizations build scalable, data-driven decision-making through modern analytics platforms.

SKILLS & CERTIFICATIONS

- Professional Certification:** Microsoft Certified: Power BI Data Analyst Associate (PL-300)
- Programming Languages:** Python (Pandas, NumPy, Scikit-learn), PySpark, SQL, Spark SQL
- Databases & Data Lakes:** Snowflake, Delta Lake, Supabase
- BI & Visualization Tools:** Power BI, Microsoft Fabric

PROJECTS

Spella Hub Master Intelligence Dashboard (MID) *(May 2026 – July 2026)*

- Designed and built an **end-to-end automated BI pipeline (Google Forms → Apps Script → Supabase→ Power BI)** to eliminate manual record-keeping for student registration, attendance, and payment tracking.
- Architected a normalized 5-table PostgreSQL schema with custom ID validation, **Row-Level Security policies**, and auto-updating triggers, and built a **Google Apps Script REST API** integration to **automate** data ingestion end-to-end.
- Delivered an executive-level **Power BI dashboard** with live **KPI cards**, **DAX**-driven dropout-risk alerts, and revenue anomaly detection, replacing a fully manual reporting process with a live, self-updating command center.

Shopify Medallion Pipeline (Microsoft Fabric)

- Designed and deployed a production-grade automated ELT pipeline processing daily Shopify orders across **3** Delta Lake layers.
- Engineered paginated API ingestion with incremental loading, PySpark struct flattening, line item explosion, and Spark SQL aggregations into business-ready Gold tables.
- Achieved **100%** pipeline automation, reducing manual reporting time from **2+ hours to 0** with daily dashboard refreshes by **3 AM**, tracking **3** executive KPIs and **\$6K+** in revenue.

NASA Jet Engine Predictive Health Monitoring System

- Created a predictive health monitoring pipeline to forecast equipment degradation and remaining useful life (RUL) for mechanical systems.
- Processed large-scale sensor telemetry data, built regression models, and deployed a performance monitoring dashboard.
- Achieved a **0.95 R²** prediction score, allowing preventative maintenance schedules to be optimized weeks in advance.

Credit Risk & End-to-End Banking Analytics Pipeline

- Developed an end-to-end data analytics pipeline to assess credit risk and evaluate risk portfolios.
- Cleaned data with Python, queried risk metrics using SQL, and engineered an interactive dashboard to evaluate risk levels and customer credit-worthiness.
- Evaluated risk assessment profiles for over **5,000** customers, accelerating credit risk evaluation times by **40%**.

Telecom Tower Runtime Optimization System

- Built a regression-based machine learning model to optimize generator runtime and fuel efficiency across regional telecom towers.
- Maintained and analyzed historical operations data pipelines, performing predictive modeling to identify anomalies and consumption trends.
- Driven a **25%** increase in operational efficiency by eliminating manual tracking and reducing generator downtime.

WORK EXPERIENCE

Data Analyst & Data Science Instructor | Spella Hub

April 2026 – Present

- Standardized and delivered a comprehensive curriculum covering data analysis, visualization, and machine learning principles.
- Facilitated technical workshops, designed data pipelines for institutional projects, and drafted automated reporting roadmaps for internal executive dashboards.
- Upskilled and trained a cohort of emerging data professional students while improving internal administrative reporting pipelines by **25%**.

Freelance Data Analyst | Dosreal Hotel

Aug 2024 – Apr 2026

- Designed, delivered, and deployed end-to-end regional business intelligence dashboards tracking core hotel KPIs (RevPAR, ADR, and occupancy rates) to enable data-driven room pricing decisions for senior management.
- Built automated data cleaning pipelines and unified analytics layers using Python and Power BI to seamlessly integrate disparate booking, revenue, and operational data sources.
- Identified a **12%** revenue growth opportunity through pricing optimization modeling and reduced manual reporting workflows by **40%** while ensuring a single source of truth across operations.

EDUCATION

Bachelor of Engineering in Electrical and Electronics Engineering | Elizade University

September 2025

- Honors:** Graduated in the Top **10%** of the engineering class (CGPA: **4.45/5.0**)

INTERESTS

Mentoring, Research, Artificial Intelligence
