Godswill Ndukachukwu Douglas

Data Analyst | Power BI Developer | SQL • Python • Snowflake • Microsoft Fabric

Port Harcourt, Nigeria | +234 7019324243 | godswilldouglas117@gmail.com

LinkedIn: Godswill Douglas | Portfolio: BI Portfolio | GitHub: Godswill-07

CAREER SUMMARY

Power BI Developer and Microsoft Power BI-certified Data Analyst with a background in Electrical and Electronics Engineering and experience in business intelligence, data analytics, data visualization, and technical instruction. Proficient in Power BI, SQL, Python, Excel, Microsoft Fabric, and Snowflake, with the ability to transform complex datasets into meaningful insights that support informed business decisions. Experienced in developing interactive dashboards, building automated data workflows, and delivering practical data analytics training. Passionate about leveraging technology and data-driven solutions to solve business problems, improve operational efficiency, and support organizational growth.

WORK EXPERIENCE

Douglas Data Express (DDE) – Founder & Lead Data Analytics Instructor | *2026 – Present*

- Founded and lead practical training programmes in Power BI and Data Analytics, equipping 7+ learners with hands-on technical and analytical skills.
- Mentor aspiring data professionals through practical projects, technical guidance, and career development.
- Supported learners in launching their own data training bootcamps and securing paid internship opportunities.

Spella Hub – Power BI Developer & Data Science Instructor | *April 2026 – September 2026*

- Standardized and delivered a comprehensive curriculum covering data analysis, visualization, and machine learning principles.
- Facilitated technical workshops, designed data pipelines for institutional projects, and drafted automated reporting roadmaps for internal executive dashboards.
- Upskilled and trained a cohort of emerging data professional students while improving internal administrative reporting pipelines by 25%.

PROJECTS

Fintech Transaction Analytics | SQL Server, T-SQL

- Designed a 3-table schema and loaded and validated 500K synthetic wallet transactions with 8 data-quality checks.
- Detected a switch outage (failure rate 20.5% against a 6.6% baseline) using rolling z-scores, and traced 78.7% of the failures to one cause.
- Built a velocity rule that flagged 5 scripted accounts making 150 near-limit transfers (about ₦7.4M) in under 10 minutes each.
- Measured 6-month cohort retention (56% to 61%) and found the biggest drop-off between months 2 and 3

Rivers State HIV Care Cascade & Treatment Outcomes Dashboard

- Built a dashboard tracking the HIV care cascade (tested, tested positive, treatment start, viral suppression) for Rivers State, Nigeria, using 2016–2025 PEPFAR MER data (3,648 records, 8.8M+ people tested).
- Cleaned the data and caught a real error: age bands such as "10-14" that Excel had auto-converted into calendar dates, which I reconstructed from the corrupted values; filtered age visuals to non-overlapping age bands to avoid double-counting.
- Found that viral suppression rose from about 72% (2017) to about 96%, while children aged 1–14 consistently suppressed worse than adults; documented data limitations and small-sample cautions on the dashboard.

Spella Hub Master Intelligence Dashboard (MID) | May 2026 – July 2026

- Designed and built an end-to-end automated BI pipeline (Google Forms → Apps Script → Supabase → Power BI) to eliminate manual record-keeping for student registration, attendance, and payment tracking.
- Architected a normalized 5-table PostgreSQL schema with custom ID validation, Row-Level Security policies, and auto-updating triggers, and built a Google Apps Script REST API integration to automate data ingestion end-to-end.
- Delivered an executive-level Power BI dashboard with live KPI cards, DAX-driven dropout-risk alerts, and revenue anomaly detection, replacing a fully manual reporting process with a live, self-updating command center.

Shopify Medallion Pipeline (Microsoft Fabric)

- Designed and deployed a production-grade automated ELT pipeline processing daily Shopify orders across 3 Delta Lake layers.
- Engineered paginated API ingestion with incremental loading, PySpark struct flattening, line item explosion, and Spark SQL aggregations into business-ready Gold tables.
- Achieved 100% pipeline automation, reducing manual reporting time from 2+ hours to 0 with daily dashboard refreshes by 3 AM, tracking 3 executive KPIs and $6K+ in revenue.

NASA Jet Engine Predictive Health Monitoring System

- Created a predictive health monitoring pipeline to forecast equipment degradation and remaining useful life (RUL) for mechanical systems.
- Processed large-scale sensor telemetry data, built regression models, and deployed a performance monitoring dashboard.
- Achieved a 0.95 R^2 prediction score, allowing preventative maintenance schedules to be optimized weeks in advance.

EDUCATION

Elizade University – Bachelor of Engineering in Electrical and Electronics Engineering | *September 2025*

- Honors: Graduated in the Top 10% of the engineering class (CGPA: 4.45/5.0)

SKILLS

Power BI • DAX • Power Query • Microsoft Fabric • SQL • Snowflake • Delta Lake • Supabase • Python (Pandas, NumPy, Scikit-learn) • PySpark • Spark SQL • Excel • Google Apps Script • Machine Learning • Dashboard Development • Technical Training & Mentoring

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate (PL-300)
- National Youth Service Corps (NYSC) Discharge Certificate – October 2026
- Digital Literacy Community Development Service (CDS) Certificate, NYSC – 2026
- Certificate in Data Analytics, NIIT Limited, Port Harcourt – 2021

VOLUNTEERING

NYSC Digital Literacy CDS – Digital Skills Trainer | Abakaliki, Ebonyi State, Nigeria | January 2026 – October 2026

- Trained 22+ individuals in practical digital skills through community training sessions across Abakaliki.
- Taught basic digital literacy to community members, building confidence with everyday digital tools.
- Showed entrepreneurs how to use AI prompting to design marketing flyers for their businesses.
- Trained participants on Google Maps navigation, cybersecurity basics, and securing accounts with two-factor authentication (2FA).

• Completed the NYSC service year and received the National Youth Service Corps Discharge Certificate

INTERESTS

Mentoring, Research, Artificial Intelligence
